About 93,000 additional jobs projected for Montana's industries, 2000-2010

by Phil Brooks, Ph.D., Chief Economist, Research and Analysis Bureau, Workforce Services Division, Montana Department of Labor and Industry

Roughly 93,000 net additional jobs (the difference between jobs created and jobs destroyed) are projected for Montana between 2000 and 2010—71,000 of which are estimated to be wage and salary jobs and 22,000 of which are estimated to be self-employment jobs.

This projection translates to an average of about 9,300 net Montana jobs per year consisting of both wage and salary jobs (1.7 percent growth per year) and self-employment jobs (1.4 percent growth per year). Self-employment jobs are forecast to have a lower growth rate because many of these jobs are in production agriculture, which is projected to increase only slightly.

Most job growth expected in service-producing sectors

Most job growth (about 65,000 net payroll jobs) is projected to be in the service-producing segment (service sector) of the Montana economy, which contains industries that do not produce a physical product. A majority of this growth is projected to be in eating and drinking establishments, gambling and other recreation establishments, personnel supply services, telemarketing and other miscellaneous business services, hotels/motels, computer services, private hospitals, noneducation local government, gasoline service stations, public postsecondary education, doctors' offices, home healthcare services, retail department stores, trucking, nonmedical residential care for children and the aged, and nursing homes.

(continued on next page)

AUTHOR'S NOTE: Although the future is never certain, it is useful to look ahead and try to determine what generally may happen in terms of the number of jobs supported within Montana's economic sectors. Most job growth involves wage and salary (payroll) jobs; consequently, wage and salary jobs are emphasized in this narrative.

Because of the inherent uncertainty in predicting the future, the projections presented here should be interpreted as only a general approximation of the true 2010 level of jobs overall or for a given industry. In addition, the average increases projected over 10 years do not apply to a specific year. One would expect employment growth for any given year to be either above or below the average for 10 years.

Together, these 16 sectors account for 58 percent of projected service sector payroll job growth, and represent a mixture of low- and high-paying jobs.

Most job growth is projected for service-producing sectors.

Much smaller job growth forecast in goodsproducing sectors

Overall job growth forecast for the goods-producing segment of the Montana economy through 2010 is much more modest than for service-type sectors. However, strong growth in construction payroll jobs is forecast, particularly for building construction and associated special trades construction jobs. (NOTE: Building construction is driven by population growth.)

Forecast job growth for mining is very modest (0.6 percent per year on average), with some subsectors declining (crude oil and gas production, gold, copper, coal and metal mining services)—counterbalanced by increasing jobs for palladium/platinum and oil/gas field services segments. Montana's one copper mine in Butte is assumed to remain closed.

Manufacturing is estimated to be basically stagnant in job growth, similar to the U.S. manufacturing sector. Wage and salary jobs are projected to continue to decline in production agriculture. (Please refer to the table on pages 6-10 for more detailed projections.)

Services jobs

Narrowly defined services (referenced as other private services in the table accompaning this article) is a major part of the broader service-producing segment of the Montana economy. It is projected to increase by about 38,000 net wage and salary jobs between 2000 and 2010. This increase accounts for more than half the additional Montana payroll jobs for this time period. (Information in the table on pages 6-10 details the variety of consumer, producer and professional services included in this category.)

Within the services sector, private health services is expected to increase by about 9,100 payroll jobs—an annual growth rate of 2.4 percent, which is similar to the national growth rate for this sector. Most job growth is

forecast in the hospital, doctors' offices, home healthcare and nursing home segments of health services. Health services payroll jobs paid an average of \$30,600 in 2001, well above the statewide average of \$25,200. Within health services, annual pay ranged from \$12,500 for home health care services to \$51,000 for an average job in a doctor's office.

Business services is projected to increase by roughly 8,800 wage and salary jobs between 2000 and 2010. Major components of this subsector include temporary help agencies that supply workers to various industries, computer services, telemarketing, and building maintenance services. Growth in this industry is part of a national trend. Computer services is forecast to be the component with the highest growth rate, with building maintenance and credit services as segments with the lowest growth rates. Average wages in 2001 ranged from about \$33,700 for computer services to roughly \$11,000 for building maintenance, reflecting differences in skill levels. Overall, 2001 wages in business services averaged \$19,800, well below average for Montana.

Pieces of the low-paying recreation and travel industry are located within the narrowly defined services category—namely hotels and other lodging places, and amusement and recreational services. This latter subsector is projected to increase by approximately 4,500 payroll jobs between 2000 and 2010. All the forecast growth is

Montana Jobs, 2000 & Projected 2010 (Wage and Salary, and Self-employment)

Source: Research & Analysis Bureau, Montana Department of Labor & Industry

in the other recreation services category, which consists principally of gambling establishments, ski areas, outfitters and the like. Average 2001 wages for this miscellaneous recreational services category were only about \$12,500. Hotels and other lodging places is projected to increase by about 2,600 payroll jobs, with 2001 average annual wages being similar to those within recreation services.

Private social services is projected to increase by about 4,600 payroll jobs over the period, or an average of 460 jobs per year. This is partly the result of the national trend toward shifting counseling and residential treatment programs away from situations where medical doctors are involved. Social services include nonmedical individual and family social services, nonmedical residential care, job training and vocational rehabilitation services, along with child day care services. Wages for 2001 for social services averaged \$15,200.

The narrowly defined services category also includes the engineering and management services subsector, which is projected to increase by roughly 3,600 payroll jobs through 2010. This subsector is the second highest paying segment of narrowly defined services. Legal services paid the highest, with \$38,500 average pay for

2001. Engineering and management services paid \$37,600 on average. Within engineering/management services, the largest growth in job numbers is forecast for the research/testing and management services segments.

Retail trade jobs

Retail trade (a portion of the service-producing segment) is projected to add about 14,000 payroll jobs to Montana's economy between 2000 and 2010, accounting for about 20 percent of total additional Montana payroll jobs. Retail trade is a low-paying segment of the Montana and national economies.

Over one-third of the retail payroll job increase—about 5,300 jobs total, or 530 jobs per year—is projected to be in eating and drinking places (fast-food outlets, restaurants and bars). Average 2001 wages in this subsector were very low at \$9,400.

The motor vehicle dealers, parts and service stations retail trade subsector is projected to increase by roughly 3,500 wage and salary jobs. About two-thirds of the increase is projected for gasoline service stations, with average 2001 wages of \$14,300. A major portion of the gasoline service stations and eating/drinking places subsectors serves out-of-state travelers.

Wage and salary jobs in general merchandise stores, both discount and nondiscount, are projected to increase by about 1,800 over the 2000 to 2010 time period. Average 2001 annual wages were \$15,600.

Other retail stores (e.g., sporting goods, drugstores and gift shops) serves both Montana residents and travelers to the state. The projected 2000 to 2010 payroll job increase for this retail subsector is about 1,400 jobs. Jobs in independent drug stores are forecast to decline, presumably as a result of competition from large general retailers with prescription drug departments. Average 2001 wages for other retail trade were \$15,400.

Retail building materials stores are forecast to add 1,200 payroll jobs over the period, largely as the result of projected building construction activity. Average annual wages were \$22,300 in 2001. This is a higher-wage component of retail trade, but wages are still below the Montana average.

Other components of retail trade—home furnishings stores and retail food stores—are projected to have smaller job increases.

Strictly apparel stores are projected to decrease in payroll employment.

Most job growth in the goods-producing sector is expected in construction.

Construction jobs

Most of the growth in goods-producing industries is projected to be in the construction sector, which is forecast to grow by 6,100 jobs between 2000 and 2010. Within construction, the growth area is in both general building contractors and special trade contractors (e.g., plumbing, heating and electrical) subsectors. Heavy construction is projected to increase only modestly, assuming that recent federal highway funding is not extended beyond its legislated six-year time horizon. Also, this sector is tied to a smaller number of specific large projects, such as pipelines, as compared with building construction. This characteristic of heavy construction leads to volatile employment levels.

Construction is a higher annual wage sector, with 2001 average Montana wages of \$30,400. Heavy construction is the highest wage component, \$39,500 for 2001. General building contractors and special trade contractors are at about the same level, with 2001 annual wages of \$27,800 and \$28,200, respectively.

Government jobs

Government employment is projected to grow at less than one-third the annual rate for the economy as a whole (0.5 percent vs. 1.6 percent), for a total increase of about 4,100 jobs.

Three detailed components of the government (public services) sector are projected to decline: federal jobs, jobs at the Montana State Hospital in Warm Springs and jobs at local government hospitals.

The federal job decline is part of a national trend. Average wage per federal job was high at \$42,700 in 2001.

The recently completed state hospital facility requires fewer workers because of fewer patients, resulting in part because of the movement toward community-based treatment. State hospital jobs paid an average of \$28,800 in 2001.

A majority of the government sector job growth will be in the other local government (excludes education and hospitals) segment, with jobs projected to increase by a total of 2,300 through 2010 in response to population growth. This is a lower than average wage segment of the Montana economy, with 2001 annual wages at about \$23,600.

Another stronger growth government subsector is the state postsecondary component of public education. Adult population increases and research contracts are driving employment growth in this segment of public education. A total increase of roughly 1,900 jobs is projected for the 2000 to 2010 time period in the state education sector, where 2001 wages averaged about \$30,600.

Slow growth is projected for local education (0.4 percent or 120 jobs per year). These jobs averaged \$25,400 for 2001—just above the state average.

Other state government (noneducation) is projected to increase by a total of roughly 180 jobs over the period 2000 to 2010, an annual growth rate of just 0.2 percent.

Wholesale trade jobs

Wholesale trade, which primarily provides distributive services to businesses, is projected to increase by about 3,400 payroll jobs between 2000 and 2010. More growth is anticipated for the more highly paid durable goods component (\$33,200 in 2001) of wholesale trade than the nondurable segment (\$29,300).

Transportation, communications and utilities jobs

Transportation, communications and utilities services together are projected to increase by about 3,000 payroll jobs (an average of 300 per year). The railroad; electric, gas, and sanitary services; small pipeline, arrangement of transportation (travel agencies); and the telegraph/message communication subsectors are all projected to have employment declines. Competition from the Internet presumably will be responsible for the decline in travel agencies. Some of the projected decline in railroad transportation and pipeline jobs is due to restructuring and substituting capital equipment for labor. Annual wages in 2001 were about \$56,000 for railroads and \$59,000 for the small pipelines subsector—all high-paying segments of the Montana economy.

The rest of this portion of the Montana economy is projected to have increased employment, led by the trucking and warehousing subsector with a projected increase of 1,500 wage and salary jobs. The communications subsector will increase in employment as the result of national trends. It remains to be seen if the telephone communications increase, which is most of this subsector's increase, will be in customer service jobs or in more highly paid jobs.

Finance, insurance and real estate jobs

Finance, insurance and real estate services combined are forecast to grow by about 2,300 payroll jobs between 2000 and 2010. Finance is projected to grow by roughly 900 jobs, mostly in the banking segment of the industry. Finance also includes securities brokers and services, the highest paying segment of the Montana economy paying \$67,300 on average in 2001. Average pay for banking was more modest at \$31,000. Primarily driven by population change, the real estate subsector should show an increase of about 1,300 wage and salary jobs. This is a lower paying segment at \$19,900 for 2001. The insurance carriers segment is projected to decline by 300 jobs,

mostly due to the decline in life insurance employment. The insurance agents and services subsector is projected to grow modestly.

Manufacturing jobs

Manufacturing is projected to increase by roughly 1,100 payroll jobs (110 per year) in spite of forecast declines in the industrial machinery and primary aluminum/lead processing industries of about 1,500 jobs, combined. Projected increases in other segments of manufacturing overcome this deficit. The largest increase is projected for wood products, which includes log homes.

Mining jobs

The mining sector, which includes energy minerals, metal and nonmetallic minerals, is projected to increase slightly by about 300 jobs between 2000 and 2010. This very modest increase is caused in part by projected declines in most segments of the industry, except for a portion of metal mining and the oil and gas services subsector. The metal mining subsector is projected to increase because of the opening of a new platinum/ palladium mine in Sweet Grass County. The operating workforce for this mine will more than counterbalance the continued closure of the Montana Resources copper mine in Butte and the possible closure of the Golden Sunlight gold mine in Jefferson County.

Agriculture, forestry, hunting and trapping jobs

The agriculture, forestry and hunting segment of the goods-producing portion of the Montana economy has been, and still is dominated by production agriculture, the raising of crops and livestock. Production agriculture has experienced employment declines for many decades. Projected to continue, this decline is caused partly by the substitution of machinery and equipment (tractors, etc.) for labor. A decrease of 2,200 agricultural wage and salary (mostly hired hands) jobs is projected for the 2000-2010 period. On the other hand, agricultural services, which includes landscape and veterinary services used by urban households, is projected to increase in keeping with projected population increases.

Specific job projections

Specific job projections are included in the table found on the following five pages. ■

SIC Code*	Industry	1990 Annual Average Jobs	2000 Annual Average Jobs	Projected 2010 Jobs	Average Job Change 2000 to 2010	2000 to 2010 Annual Growth Rate

Economic highlights and employment outlook

Civilian labor force

Montana's civilian labor force averaged 470,300 the fourth quarter of 2002—down 5,300 over the quarter, but up 11,900 over the year.

Employed

The number of Montanans employed during the quarter averaged 450,000—down 9,300 over the quarter, but up 12,600 over the year.

Unemployed

The number of Montanans unemployed during the quarter

Quarterly Employment Trends

		MONTANA			UNITED STATES
Quarter	Montana Civilian Labor Force*	Montanans Employed	Montanans Unemployed	Unemployment Rate (Montana)	Unemployment Rate (U.S.)
2002 - 4th	470,300	450,000	20,200	4.3%	5.6%
2002 - 3rd	475,600	459,300	16,300	3.4%	5.7%
2002 - 2nd	474,800	455,000	19,800	4.2%	5.8%
2002 - 1st	468,400	442,800	25,600	5.5%	6.2%
2001 - 4th	458,400	437,400	21,000	4.6%	5.2%

^{*}Rounded Civilian Labor Force Numbers, 2002 Benchmark (Not Seasonally Adjusted)

averaged 20,200—up 3,900 over the quarter, but down 800 over the year.

The average unemployment rate for the quarter was 4.3 percent—up

nine-tenths of a percentage point over the quarter, but down three-tenths of a percentage point over the year.

Wage and salary jobs by industry sectors

(NOTE: Numbers may not total due to rounding.)

Total nonagricultural wage and salary employment in Montana averaged 400,700 jobs for the fourth quarter of 2002—up about 200 jobs over the quarter, and up approximately 7,900 jobs over the year.

Mining averaged 5,400 jobs—down about 200 jobs over the quarter and about even over the year.

Construction averaged 22,400 jobs—down approximately 1,300 jobs over the quarter, but up about 1,400 jobs over the year, with over half of the over-the-year gain in special trade construction.

Manufacturing averaged 23,500 jobs—down 500 over the quarter, and down about 400 over the year.

Transportation, communications and utilities (TCU) averaged 21,700 jobs—nearly even over the quarter and over the year.

Trade averaged 103,100 jobs—down approximately 1,700 jobs over the quarter, but up about 1,500 jobs over the year, mostly in building materials/gardening supply stores, eating and drinking places and department stores.

Finance, insurance and real estate (FIRE) averaged 18,800 jobs for the quarter—up about 200 jobs over the quarter, and up about 700 jobs over the year, about half in commercial banks.

Services averaged 118,200 jobs—down about 3,200 over the quarter, but up approximately 2,900 over the year. Most of the over-the-quarter decline came in hotels and other lodging places. The largest over-the-year increases came in business services, health services, social services, and engineering and management services.

Total government averaged 87,400 jobs—up about 6,800 jobs over the quarter, and up approximately 1,800 jobs over the year, with federal, state and local government sectors all contributing to over-the-year job growth.

Average weekly hours and earnings

Average weekly earnings for production workers averaged \$419.25 for the fourth quarter of 2002—up \$5.10 over the quarter, and up \$14.90 over the year.

Average weekly hours averaged 32.5—down five-tenths of an hour over the quarter, but up one-tenth of an hour over the year.

Average hourly earnings averaged \$12.90 for the quarter—up 35 cents over the quarter, and up 42 cents over the year. ■

Industry news from around the state

(Gathered primarily from state newspaper reports)

Agriculture

Anheuser Busch has announced it will build a \$7 million malting barley storage and loading facility in Sidney. The plant will be able to handle 10 million bushels or more of malt barley a year, which is expected to spur cultivation of malt barley in the state.

Mining

Stillwater Mining Co. has announced it is selling controlling interest in the company to Norlisk Nickel, a major producer of nickel, palladium and platinum based in Russia. Stillwater Mining Co. owns a platinum-palladium mine near Nye and a smelter and refinery in Columbus, and employs about 1,600 workers in the state. A Stillwater spokesperson says changes in the company's day-to-day operation would be minimal, and that Norlisk Nickel has agreed to honor Stillwater's "good neighbor agreement" with surrounding communities and environmental groups.

Construction

The defense spending package recently signed into law by President Bush includes \$15 million for military construction in Montana, including housing and a new bomb/missile loading training

facility at Malmstrom Air Force Base, a Naval Reserve Center in Billings and an Army National Guard maintenance facility in Helena.

A \$6.7 million interpretive center and museum is under construction at Fort Peck Dam in northeastern Montana. The U.S. Army Corps of Engineers center will showcase audio and video exhibits relating the history of the project, which provided jobs to about 30,000 Depression-era workers. The museum will present the history of Eastern Montana and display area fossils. It is expected the Fort Peck Dam Interpretive Center and Museum Inc. will open to the public in May 2004.

Manufacturing

Stimson Lumber Co. closed its lumber mill in Libby in December, putting about 300 people out of work. The mill was Libby's largest employer. Laid-off workers are eligible to apply for federal Trade Adjustment Assistance Program funds to pay for retraining and reemployment services. The company says a smaller specialized plant in Libby will not close—and may be expanded in the future. A spokesperson cited foreign competition in the plywood market as the main reason behind the decision to close the Libby mill.

The Cream of the West cereal business that began in Billings in 1915 was recently purchased by eight investors from Wheatland County and relocated to Harlowton. The company's cereals are sold nationwide through 25 distributors.

Video Lottery Consultants says it will move its systems department and 45 programming and software engineering jobs from Bozeman to Clifton, N.J. sometime in 2003 or 2004. The affected workers will be offered the choice of relocation to New Jersey or a severance package. VLC is a subsidiary of International Game Technology, headquartered in Reno, Nev.

Smurfit-Stone Container Corp. says it will not restart a paper machine idled since March 2001, when about 100 workers were laid off. A spokesperson says the plant will continue to operate with only two of its three machines. The Frenchtown mill manufactures corrugated liner board, and currently employs about 485 people.

Roscoe Steel and Culvert Co. in Missoula has laid off 26 of its 50 employees, citing a weak structural steel market. The company manufactures steel pipes for culverts and drainage systems, as well as structural steel for construction projects.

Louisiana-Pacific Corp. has agreed to sell its Missoula particle board mill to Roseburg Forest Products of Roseburg, Ore. The Missoula plant employs more than 200 workers in the production of specialty and commodity particle board products. Louisiana-Pacific says it does not plan to sell its mills in Belgrade and Deer Lodge.

All American Pharmaceutical & Natural Foods Corp. of Billings employs about 45 workers in the production of nutritional supplements shipped to all 50 states and around the world. The company moved to Billings from Los Angeles in 1991.

The Fort Belknap Community has purchased the Hi-Line Packing plant near Malta and expects to reopen the meat plant with a different name as early as February 2003.

Glacier Brewing Co. has opened in Polson. The microbrewery's startup plan calls for the production of four beers and some specialty sodas.

Transportation, Communications & Utilities

Touch America Holdings Inc. has announced it will lay off about 225 employees through the first part of 2003—accounting for about 35 percent of the company's workforce. A spokesperson says most of the positions being eliminated are tied

to the sale of 70,000 switched long-distance customer accounts to Buyer's United in Utah. Of those being laid off, about 85 work in Missoula, 35 in Butte, and 45 in Denver.

Trade

A Washington Corporation business, Missoula-based Modern Machinery Co. Inc., will double its workforce to 200-250 employees with the purchase of Seattle-based Pacific North Equipment.

Three more Wheat Montana outlets are planned in Montana for Bozeman, Helena and Missoula. One already is open in Kalispell.

Finance, Insurance & Real Estate

Health Connections, formerly known as New West Health Services, has acquired Montana Benefits and Life Co. of Kalispell and says it plans to set up a customer service center in Kalispell.

Information used in these industry briefs was gathered primarily from state newspaper reports.

Services

Butte's MSE Technology Applications Inc. has purchased the assets of Tetragenics, an electronic controls and monitoring subsidiary of Touch America. The purchase means Tetragenics and seven of its employees will stay in Butte.

ILX Lightwave laid off more workers in October—23 of them in Bozeman. A spokesperson for the Bozeman-based, high-tech company says the company has been hurt by a decline in the national fiber optics industry.

First Horizon Home Loans says it will open a regional call center in Great Falls early in 2003 to service the 24 First Horizon branches in the company's northwest region, which includes Idaho, Oregon, Washington and Montana. The first employees hired, according to a newspaper report, worked at First Nationwide Mortgage Corp.'s Great Falls call center before it closed in 2002. A First Horizon spokesperson says as many as 100 people may eventually be employed at the center.

^{*} A single-county Metropolitan Statistical Area (MSA) is determined by the U.S. Office of Budget and Program Planning and must have a central city with a population of 50,000 or more. Single-county MSAs are named after their central cities. Billings and Missoula MSA employment is produced by the Montana Department of Labor and Industry for use as a state economic indicator.

(1982-84 = \$1.00)		\$0.55	\$0.55	\$0.56		\$0.56	\$0.56

THE CONSUMER PRICE INDEX (CPI) IS A MEASURE OF THE AVERAGE CHANGE IN THE PRICES PAID BY URBAN CONSUMERS FOR A FIXED MARKET BASKET OF GOODS AND SERVICES. THE CPI IS CALCULATED MONTHLY FOR TWO POPULATION GROUPS, ONE CONSISTING ONLY OF THE URBAN HOUSEHOLDS WHOSE PRIMARY SOURCE OF INCOME IS DERIVED FROM THE EMPLOYMENT OF WAGE EARNERS AND CLERICAL WORKERS (CPI-W). AS NEW USES WERE DEVELOPED FOR THE CPI IN RECENT YEARS, THE NEED FOR A BROADER AND MORE REPRESENTATIVE INDEX BECAME APPARENT. THE ALL-URBAN CONSUMER INDEX (CPI-U), INTRODUCED IN 1978, IS REPRESENTATIVE OF THE 1982-84 BUYING HABITS OF ABOUT 80% OF THE NONINSTITUTIONAL POPULATION, COMPARED WITH 32% REPRESENTED IN CPI-W.

SOURCE FOR DATA: SEE TECHNICAL NOTE S-6 ON "SOURCES OF DATA" PAGE AT BACK OF THIS PUBLICATION.

Note: The Bureau of Labor Statistics has begun using a new formula for calculating the basic components of the CPI-U and the CPI-W effective with the data starting January 1999.

Trust Fund Growth data was derived from the ETA 2-112 (Employment and Training Administration Unemployment Insurance Financial Transaction Summary) report.

Glossary of terms

- 1. <u>Civilian Labor Force</u> the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
- 2. Employed those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working, had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
- 3. <u>Unemployed</u> those persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
- 4. <u>Unemployment Rate</u> the number of unemployed expressed as a percent of the civilian labor force.
- 5. Residence Data a count of people by where people live.
- 6. Establishment Data a count of jobs by where people work.
- 7. Seasonally Adjusted Labor Force Series to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-12 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.
- 8.<u>MSA</u> Metropolitan Statistical Area as determined by the Office of Management and Budget. The MSA must have a central city with a population of 50,000 or more.
- 9.<u>LFA</u> Labor Force Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.
- 10.<u>LWIA</u> The enactment of the Workforce Investment Act (WIA) of 1998 is the first wholesale reform of the nation's job training system in more than 15 years. Montana's State Workforce Investment Board was created by the Governor in response to this Act and its first task was to certify the local workforce investment areas (LWIA), which are guided by local workforce investment boards (these local boards replaced JTPA's Private Industry Councils). The 2 LWIAs for Montana are known as Rural Concentrated Employment Program, or CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties), and Balance of State (the other 46 counties).
- 11.<u>BENCHMARKING</u> is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In the case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month to month changes in the level.
- 12.<u>CES-790 Program</u> urrent employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state. Because this information comes from a survey of employers, persons who work for 2 different companies would be counted twice. Thus, nonagricultural employment is actually a count of the number of jobs filled, rather than the number of persons employed.

Sources of data

- S-1.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics (BLS). LAUS data (Local Area Unemployment Statistics program) is adjusted to the Current Population Survey benchmark and is the official BLS approved series that is used to allocate federal funds and determine eligibility for federal assistance programs. This series represents employment and unemployment by place of residence, and is not comparable to the place-of-work industry employment series (CES data). LAUS data is calculated for the week that includes the 12th of the month. Workers involved in labor disputes are counted as employed. Total employment in the labor force also includes agricultural workers, unpaid family workers, domestic workers and the self-employed.
- S-2.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau. The unadjusted unemployment rate is prepared by the LAUS program in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. The seasonally adjusted rate is an unofficial series, and is provided only for use as a state economic indicator.
- S-3.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from LAUS data. Data for Service Delivery Areas and Labor Force Areas is calculated from the official data series by summing up employment and unemployment for the appropriate counties involved, and calculating an unemployment rate from the summed data for each area.
- S-4.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau in cooperation with the U.S. Department of Labor's Bureau of Labor Statistics. Data from the CES (Current Employment Statistics) program represents nonagricultural wage and salary employment by place of work, and covers full-time and part-time employees who worked during, or received pay for, the payroll period that includes the 12th of the month. The data excludes the self-employed, volunteers, unpaid family workers and domestic workers. Persons on sick leave, vacations, or holidays (and being paid for that period by their employer) are considered employed. Payroll and worker hour data is collected for production and related workers in manufacturing industries, nonsupervisory workers in private service-producing industries, and construction workers in construction industries. The earnings figures are "gross" figures—that is, they reflect changes in wage rates, shift differentials and premium pay for overtime work. The hours figures relate to the hours for which pay was received, which is different from scheduled or standard work hours.
- S-5.) Prepared by the Montana Department of Labor and Industry's Research and Analysis Bureau from a survey of Business Establishments as part of the BLS-790 Program. Information on female employment is computed as a ratio of all employees of the Current Employment Statistics, and is produced for informational purposes only.
- S-6.) Tabulations produced by the U.S. Department of Labor's Bureau of Labor Statistics, and reprinted by the Montana Department of Labor and Industry's Research and Analysis Bureau for informational purposes only. This is a national data series because Montana data is not computed separately.

Index of 2002 research articles

1st Quarter 2002

• NAICS in the new century: An improved system of classifying industries for the purpose of gathering employment and wage data is "going live" in Montana.

2nd Quarter 2002

• Why seasonal events cause fluctuations in employment and unemployment levels: Seasonal events such as weather changes, harvests, major holidays and school openings and closings cause fluctuations in employment and unemployment levels.

3rd Quarter 2002

• Which wage rate is right for you: Wage information is produced for different purposes and at different levels. It's not that the information is difficult to get; rather, it's deciding which of a number of wage rates will be most useful in a particular instance.

4th Quarter 2002

• About 93,000 additional jobs projected for Montana's industries, 2000-2010: This projection translates to an average of about 9,300 net (the difference between jobs created and jobs destroyed) jobs per year.
